

Metal Awnings

Metal awnings are a great way to achieve that architectural enhanced look while maintaining the durability you want.

You can still get the wide variety of sizes, shapes and, to a lesser extent, color with metal awnings yet get that durable Kynar finish to boot. Pre-engineered metal awnings are many times a great alternative to framed mansard roofs.

AWNEX can assist in the design, engineering, manufacturing and installation of any commercial awning project regardless of size and location. We have the experience and knowledge to provide solutions to your awning challenges.

AWNEX, Inc.

Wide variety of sizes, shapes, colors and features. If you can imagine it, we can probably build it.

The metal cladding can be a prefinished product from one of many suppliers, or we can fabricate our own. The frames are aluminum tubing designed to withstand whatever loads are required.

We can have open ends or closed, open bottoms or metal soffits, include lights, graphics, etc.

Let us work with you, your architect, contractor or designer. We can help ensure you get what you want at maximum value.
